

#1. up to 10x Lighter

You do the math!

5 rolls PermaFeltSilver™ = 50 squares = 140 lbs.

25 rolls #30 felt = 50 squares = 1375 lbs.

Net Savings... (drum roll) 1235 lbs!!

Ask your "back" which one it prefers.

#2. up to 20x Stronger

PermaFeltSilver™ is much stronger than #30 felt. So blow offs are a thing of the past. It's mechanically nailed down with plastic cap nails or staples, using less fasteners per square than conventional felts.

PermaFeltSilver™ is ideal under virtually all types of roofing.

#3. up to 5x More Coverage

PermaFeltSilver™ covers more than your typical #30 felt. Try five times more! What does that mean? With up to 10 times less weight and 5 times more coverage than traditional felt, that means less time loading rolls up ladders, and more time installing.

#4. Slip Resistant Surface

PermaFeltSilver™ is coated on both sides with a special embossed slip resistant coating that also provides a layer of toughness. It has a "Real Feel Factor" to it. The top side contains a proprietary rubber-modified polyolefin coating.

#5. Easier Installations

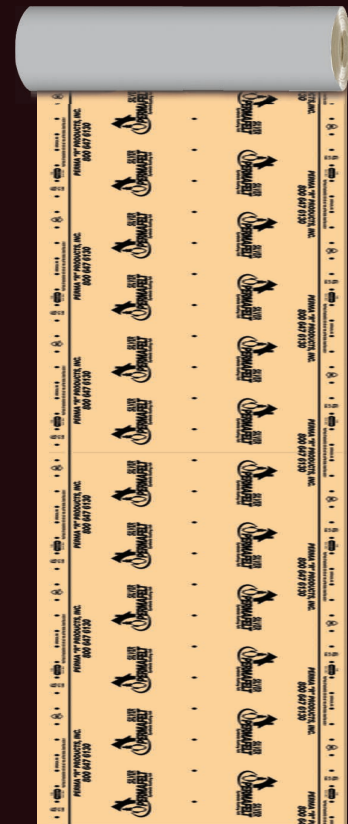

PermaFeltSilver™ features a khaki surface that stays cooler to work on and keeps buildings cooler during the dry-in time of construction, while still absorbing sunlight on cold days to help reduce frost.

PermaFeltSilver™ will not support mold growth, rot, or dry out as it contains no asphalt. It's also 100% recyclable.

#6. UV Resistant

PermaFeltSilver™ can remain exposed for up to six months in direct sunlight without breaking down unlike traditional asphalt felts.

*A better alternative to
asphalt roofing felts*

*Custom printing
available*

**FOR USE
AS A REPLACEMENT FOR ALL ASPHALT FELTS**
