

## Non-woven house wrap

PermaGuard™ is a non-perforated, non-woven polypropylene house wrap designed to add a superior level of moisture and air barrier management. PermaGuard™ is an excellent secondary weatherization system that aids in deflecting water and wind-driven rain, yet breathes to allow trapped moisture vapor in the wall cavities to escape, thus preventing damaging rot and mold to a building. PermaGuard™ housewrap provides excellent defense against air infiltration by reducing drafts, increasing comfort and reducing energy loss from the home. By wrapping your home you're sealing your home's gaps, cracks, or holes that may occur during construction. PermaGuard™ is the right choice when you need a superior moisture and air management system for your wall assembly. PermaGuard™ is ideal for all residential, multi-family, or commercial projects and meets or exceeds the IBC and IRC requirements for water resistive barriers and the new energy codes for air resistance. Used in conjunction with our superior window and door flashing system, PermaTak™, PermaGuard™ provides the complete package for moisture and air penetration management.

- Provides effective moisture management
- Provides superior air resistance
- Strong and durable
- Easy installation
- Light weight
- Available with custom logo

## FOR USE

AS A REPLACEMENT FOR GRADE D PAPER

*Moisture and air infiltration barrier*
