

Woven house wrap

Air Resistance

PermaPro™ housewrap provides defense against air infiltration by reducing drafts, increasing comfort and reducing energy loss from the home. By wrapping your home you're sealing your home's gaps, cracks, or holes that may occur during construction. It's the perfect windbreaker for your home.

Transmits Moisture Vapor

MVTR is one of the most important factors in true performance in housewraps. Perma R has made no exceptions in making sure that its performance exceeds standard criteria in this arena. Use PermaPro™ and know that your home will be protected from moisture entrapment. Moisture can escape from behind the housewrap, reducing the potential for inherent moisture problems that lead to rot and energy loss.

UV Protected

UV is good for one thing, getting a suntan, and even then its breaking down your skin. With PermaPro™ this isn't a problem. Performance of the product isn't affected. With UV inhibitors built into the construction and coating of the fabrics, UV doesn't stand a chance "under the sun".

Strong & Durable

If the wrap can't hold up to job site "wear and tear", how can it perform its job? PermaPro™ once again exceeds industry standards. We all know that if the wrap is damaged before the install, that area is susceptible to problems. Check out our technical data specifications.

Easy Installation

We know Perma R's product line packs a big punch on features and performance, but that only applies if you can install it. PermaPro™ provides a level of translucency to improve wrap placement and installation. PermaPro™ is built with just the right amount of rigidity to allow for a good, flat, and even install, which allows for ease of installing corners and bends that accompany many odd shaped homes. Now that's flexibility!

Custom Logo

PermaWrap™ can be printed with your company's logo to provide a marketing billboard to promote your business.

FOR USE

AS A REPLACEMENT FOR GRADE D PAPER
